- Gamification 🎮

Presentation

What problem needs to be solved?

Playing cards shall be detected and automatically summed up to enable a Black Jack game with visual feedback. The system shall indicate when the value of 21 is exceeded.

Project ideas:

- Reliable recognition of card values
- Automatic calculation of the current hand value
- Dashboard for visualization and/or signal lamp for binary feedback
- Calculation of probability of exceeding the value of 21 with the next draw
- Multiplayer

Which devices and/or equipment do you need to realize the use case?

- Inspector
- Cables
- Playing cards
- Signal lamp
